Sea un metal típico que cumple la ley de Ohm y que en el rango visible tiene una conductividad $\sigma = 10^7 \,\Omega^{-1} \text{m}^{-1}$ y una permitividad eléctrica $\varepsilon \approx \varepsilon_0$. Si en el instante inicial su densidad de carga por unidad de volumen ρ_0 , determinar el tiempo que debe de transcurrir para que esa carga disminuya en un factor 10.

Emación de continuidad:

$$\vec{\nabla} \cdot \vec{J} + \frac{\partial P}{\partial t} = 0$$

Ley de Ohm:
$$\vec{J} = \vec{\sigma} = \vec{E} = \vec{\sigma} \cdot \vec{E}$$

Ley de Gauss:
$$\vec{\nabla} \cdot \vec{D} = P$$

Entonces:

es deux:

$$\frac{\nabla \rho + \frac{\partial \rho}{\partial t} = 0}{\varepsilon \times \varepsilon} + \frac{\partial \rho}{\partial t} = 0$$

$$\frac{\nabla \rho + \frac{\partial \rho}{\partial t} = 0}{\nabla \varepsilon} = 0$$

$$\frac{\nabla \rho + \frac{\partial \rho}{\partial t} = 0}{\nabla \varepsilon} = 0$$

$$\frac{\nabla \rho + \frac{\partial \rho}{\partial t} = 0}{\nabla \varepsilon} = 0$$

$$\frac{\partial P}{P} = -\frac{dt}{T} \rightarrow P(t) = f_0 e^{-t/T}$$

$$\frac{\rho(t)}{\rho_0} = e^{-t/c} \rightarrow \ln\left(\frac{\rho}{\rho_0}\right) = -t/c$$

de donde:

$$\pm = - T \ln \left(\frac{P}{P_0} \right) = - \frac{\epsilon_0}{\sigma} \ln \left(\frac{P}{P_0} \right) = \frac{1}{100}$$

$$= - \frac{\epsilon_0}{100} \ln \left(0.1 \right) = - \frac{8.854 \times 10^{-12}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{0.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{0.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10 \times 10^{7}} \ln \left(0.1 \right) = \frac{10.8854 \times 10^{-19}}{10^{7}} \ln \left($$
